

How dare you consider preventing satellite radio from providing traffic and weather! It is a paid service much like cable television and I can not consider any reason that such a service should be prevented from offering information or entertainment. Broadcast radio is afraid of this service and doing whatever they can to stop its development. Don't be the agency that stifles development of U.S. industries.

Don't just reject the NAB's petition 04-160, comment back that you have no intention of stopping a paid service and that you support development of satellite radio!
